

# Introduction

**Name:** Nitin G

**Roll Number:** EE22B041

## **Previous Experience:**

I have had previous experience in working with some small projects like making rc cars and playing with electronics. I love challenges. I am a very logic loving person and love to solve problems that would make me think for a looong time. I also have always had a fascination for electronics. I developed an interest and dug into how a 555 timer works and I simulated a clock on tinkercad. This was when the interest of electronics blossomed in me. Prithvi, Venkat and I made a robot (?) that would play the dino game by using a LDR and a servo motor. I really enjoyed doing that. We also built a rc car operated using esp32.

## **Current POR's:**

Avanti  
Analytics club DC  
Programming Club Apprentice  
IITMTV ACC

## **Why I want to work in the team:**

I feel that this team is most suited to my interests as there is a lot of scope to work with microcontrollers and make pcbs and design circuits. These are things that really piqued my interest and I would want to learn and contribute to the team. Abhiyaan also provides an amazing environment with very intelligent people among whom I would love to work and also add my contributions. One of the most important things is the bolt project. The fact that we will leave a lasting thing in the campus long after we are gone is a very nice goal to be working towards. These are the most important reasons why I want to work in Abhiyaan.
